

## **Acceptable Automatic Pool Chemical Controllers**

The automatic chemical controller units listed below have been reviewed and approved by the Ohio Department of Health (ODH) in accordance with Ohio Administrative Code (OAC) 3701-31-04(D)(7). This rule sets forth minimum functional requirements for automatic chemical controllers whether they are installed on public spas, public swimming pools, special features or spraygrounds. This requirement became effective January 1, 1999 with the specifications for these units modified in April 2011 to require the monitoring and display of both pH and oxidation-reduction potential (ORP). According to OAC 3701-31-02(G)(3) the director shall maintain a list of controllers that meet these requirements. This is not a comprehensive list. If a unit is not on this list but meets the specifications of 3701-31-04(D)(7)(a) through 3701-31-04(D)(7)(d), the manufacturer may submit the unit for review. Please contact the public swimming program at (614)644-7438 for information on the submittal process.
